

It grows where nothing else will.

Kodra (Kodo) · Kutki (Little Millet)
Varagu in Tamil · Samai in South India

These ancient grains thrive in poor, rocky,
rain-fed soil — with as little as 400mm of annual
rainfall. No irrigation. No synthetic inputs.

*This isn't just a food story.
It's a climate story.*

Ragi's glycemic index is around 54.

Half that of white bread.

● Ragi (Kelvaragu / Ragulu / Mandua)
— GI ~54

● White Rice
— GI ~73

● White Bread
— GI ~75

For 537 million people living with diabetes globally, this is not a food trend — it's a life-changing alternative.

Bajra has 2–3x more iron per 100g than spinach.

The grain we forgot beats the superfood we worship.

Bajra

(Hindi/Marathi) · Kambu
(Tamil) · Sajje (Kannada)

8–9 mg iron / 100g

**Fresh
Spinach**

2–4.5 mg iron / 100g

Nearly 2 billion people worldwide suffer from anaemia. The answer may have been growing in Indian fields for centuries.

(Source: WHO; NIN/ICMR; ICAR-AICPMIP)

The UN declared 2023 the International Year of Millets.

And India led it.

70+ countries participated

USD 75M+ in Indian millet exports in 2022–23

~20% jump in a single year

This is a movement. Not a moment.

170 lakh tonnes. One overlooked grain.

India grows ~20% of the world's millets.
Yet most people only know one.

- Jowar (Sorghum) — the only one most know
- Bajra (Pearl Millet)
- Kangni (Foxtail)
- Kodra (Kodo)
- Cheena (Proso Millet)
- Ragi (Finger Millet)
- Sanwa (Barnyard)
- Kutki (Little Millet)

*That is one of the most underutilized
nutritional libraries on Earth.*
